

# Chemical Free Cleaning Technology

---

- **Abrasives**
- **Activated Water**
- **Microfiber Cloths, Mops & Dust Control Cleaning Tools**

# Abrasive Hand Pads & Floor Pads

---

## CLEANING TIPS

- Melamine hand pads are aggressive in removing all types of soil without damage to metal and painted surfaces.

- Maroon strip pads eliminate the need for solvent based wax strippers and only require plain water to remove floor finish on vinyl tile, terrazzo and other floor surfaces.

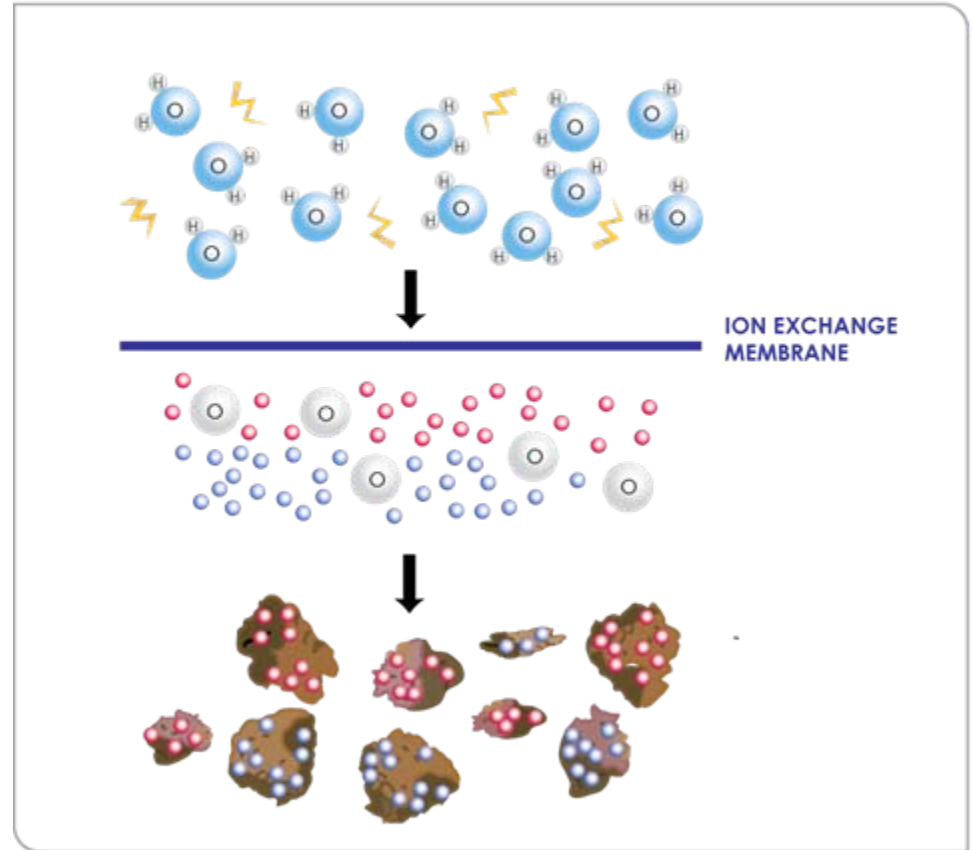

# Chemical Free Stripping Equipment

---

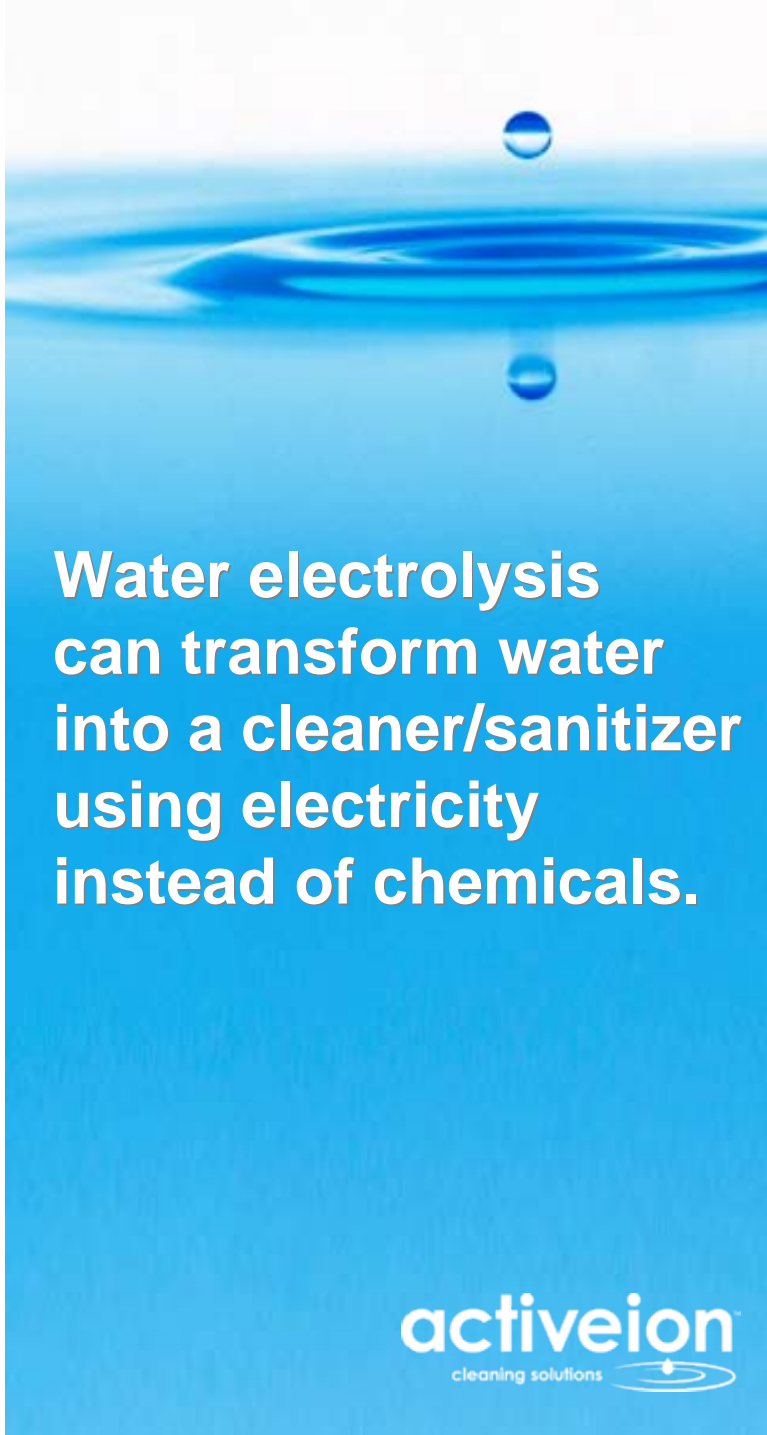

Orbital Floor Scrubbers use 70% less water to clean floors and can strip tile flooring with plain water.

# Tapping Water's Power: It's Called Water Electrolysis

CHARGING → TRANSFORMING → CLEANING

**Water electrolysis  
can transform water  
into a cleaner/sanitizer  
using electricity  
instead of chemicals.**

REDUCING → CHARGING → SUSPENDING

**Hand held spray applicator replaces many  
Cleaning products (All Purpose - Carpet - Glass –  
Restroom - Stainless Steel - Whiteboard)**

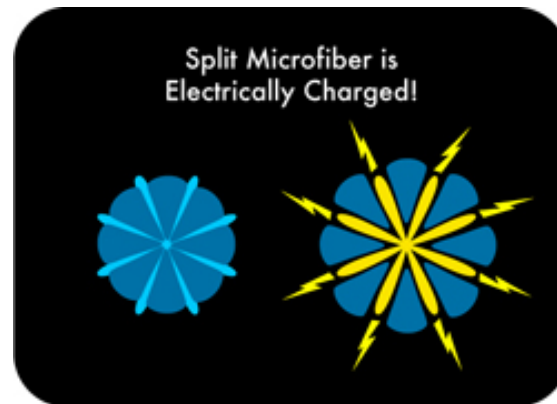

**Tennant chemical-free ec-H2O technology**

**Water electrolysis  
occurs in two forms:  
dual-stream and,  
more recently,  
blended-stream.**

# Microfiber Cloths, Mops & Dust Control Cleaning Tools

**Why microfiber ? Microfiber leaves no residue, contrary to cotton.**

- Several benefits of microfiber were highlighted in a 1999 study by the University of California Davis Medical Center, which showed that bacteria was reduced by 99 percent after cleaning with a microfiber mop compared to a 30 percent reduction when cleaning with a conventional mopping system
- According to a study by the U.S. Environmental Protection Agency (EPA), using microfiber as opposed to conventional mopping methods can reduce water use by up to 95 percent. Using microfiber also reduces the need for chemicals and paper wipes, which can have a negative impact on the environment.

# Microfiber use reduces chemical & water use, traps & holds more dirt & bacteria and improves worker ergonomics while improving healthy buildings.

- Microfiber cleaning cloths are color coded to reduce cross contamination (Green, Blue, Red or Yellow)
- Durable up to 500 washings. Available to purchase or rent
- Specialty microfiber buckets & carts hold all microfiber cleaning tools.
